

# V45 VFFS Bagger

The V-45 combines the durability of our V-32 bag machine with the sleek design and versatility of our V-60 bag machine. The result is an intermittent motion vertical bagging solution that is designed to withstand harsh environments where high pressure washdown is required.

Designed with a purpose, the V-45 features an all-stainless steel design allowing you the ability to hose down your machine without having to cover any components. From easy-change features to user-friendly controls and a highly-efficient operating system, this rugged solution will maximize your uptime and increase packaging efficiencies.

## Built For Harsh Washdown Environments
